

GRANDIS LEGACY

Grandis Legacy Rulebook for AI

Game Flow Reference v0.3

Runtime-aligned PDF lock - 14 July 2026

Core rule

UI and AI submit intent. Runtime validates, commits, resolves, records, and owns the resulting Game State.

Scope: turn flow, phase flow, legal action flow, cost and choice flow, attack and response flow, attachment lifecycle, positioning, Legacy, Racial Traits, hidden information, and AI/runtime boundaries.

Authority component	Locked version / source
Card visual and printed source	Grandis Legacy Cards Season 1_FINAL - 198 cards
Runtime Foundation	v1.50
Runtime Core Template	v0.21
Season 1 Runtime Data	v0.11.4
Effect Checkpoint	v0.10.2
Shared Runtime Manual	v1.9
Positioning System	v2.2

Document status: v0.3 supersedes v0.2 wherever the current executable runtime stack defines newer behavior. This document does not replace card art, card database, effect recipes, or executable tests.

Contents

1. Document Scope and Authority
2. Core Principle and Runtime State Machine
3. Player Structure, Board, and Zones
4. Win and Lose Conditions
5. Game Start Flow
6. Turn and Phase Structure
7. Draw Phase
8. Deploy Phase
9. Battle Phase
10. Reform Phase
11. End Phase
12. General Action, Cost, and Choice Flow
13. Card Family Flow
14. Attack Declaration and Resolution
15. Response Chain and Priority
16. Multi-target Response Windows
17. Attack Targeting and Positioning System v2.2
18. Special Attack Shapes and Restrictions
19. Damage, Hit, and Connected Resolution
20. Healing Flow
21. Status Flow
22. Exhaust and Casting
23. Attachment and Ongoing Effect Lifecycle
24. Reposition and Secondary Continuation
25. Defeat, Legacy Mode, and Revive
26. Legacy Ability and Hidden-information Flow
27. Racial Trait Flow
28. Deck-out and Effect Draw
29. Ultimate, EXP, and Lineage Validation
30. Zone Movement and Runtime Logging
31. AI Decision Flow and Runtime Safety
32. UI Presentation and Animation Boundary
33. FINAL Card Source Behavior Locks
34. Duration Wording Lock
35. Document Authority and Version Lock
- Appendix A. Summary Flows
- Appendix B. v0.2 to v0.3 Change Summary

1. Document Scope and Authority

This rulebook defines the readable game-flow contract used by AI, Local AI, PvP clients, QA tools, and future application integrations. It explains how intents move through validation, commitment, response, resolution, continuation, and state-based checks.

- Runtime Foundation and Runtime Core are the executable authority for gameplay behavior.
- Season 1 Runtime Data and Effect Checkpoint define card-specific legality, targets, costs, effects, and exceptions.
- The FINAL card archive is the locked visual and printed source for the 198 Season 1 cards.
- UI and AI are not allowed to invent legality, damage, healing, zone movement, target eligibility, or win/loss results.
- Where printed wording and executable structured data differ, runtime structured data and certified tests control implementation until the source is explicitly re-locked.

Not a UI specification

This document may state required prompts, visibility, and information boundaries, but it does not prescribe layout, colors, animation style, or screen composition.

2. Core Principle and Runtime State Machine

Grandis Legacy is processed as a deterministic state machine. Every legal action follows the same authority boundary even when individual cards skip some checks.

Order	Runtime stage
1	Read current Game State and active player
2	Read current phase, pending frame, and priority owner
3	Generate legal actions
4	Receive player or AI intent
5	Validate timing, source, class/lineage, cost, requirement, target, and capacity as applicable
6	Require explicit selection and confirmation where an object choice exists
7	Commit cost and move the action to Pending / Casting / Response Pending
8	Open response priority when applicable
9	Resolve response frames last-in-first-out
10	Resolve the original action and any registered continuation
11	Apply state update and zone movement
12	Process triggers, defeat, Legacy replacement, and lose checks
13	Return legal actions for the updated state

A card type does not force every action through identical source or target checks. Structured card data determines which checks are required. Validation failure never pays cost, Exhausts a source, or moves a card unless a rule explicitly says otherwise.

3. Player Structure, Board, and Zones

Each player uses a fixed three-position tactical board. There is no fourth Hero position.

Public board structure	Rule
Left / Center / Right tactical slots	Each slot mode is HERO or LEGACY.
Hero Attachment Slots	Each Hero identity has two persistent Attachment Slots.
Mana Pool and Mana Regen	Runtime-owned numeric resources.
Racial Token Pool	Default maximum is 2.
Main Deck and Legacy Deck	Separate zones with separate movement rules.
Discard Pile	Public zone unless a future rule explicitly changes visibility.
Hand	Private to its owner.
Pending / Casting / Response Pending	Temporary runtime zones used during commitment and resolution.
Opponent Played	Transient reveal zone for specific public reveals; not a permanent zone.

- Hero state includes identity, HP, Max HP, EXP, rank, statuses, attachments, Exhaust, casting state, and usage markers.
- Legacy is not a Hero. It has no HP, EXP, status, Exhaust, Hero Attachment Slots, class source permission, or Racial Trait permission.

- Attachments follow the Hero identity when that Hero changes tactical slots.

4. Win and Lose Conditions

A player loses immediately when one of the following runtime conditions is confirmed:

1. All three allied Heroes have been defeated.
2. The mandatory Draw Phase draw cannot draw because the Main Deck is empty.
3. The player surrenders the match.

Deck-out distinction

An effect draw outside the mandatory Draw Phase draw may draw fewer cards than requested, including zero, without causing an immediate loss.

5. Game Start Flow

4. Both players load a legal deck and select three starting Heroes.
5. Place the three Heroes into Left, Center, and Right.
6. Initialize Hero state, Mana Pool, Mana Regen, Racial Token Pool, Main Deck, Legacy Deck, Hand, Discard Pile, and Attachment collections.
7. Shuffle each Main Deck.
8. Do not shuffle a Legacy Deck unless an explicit effect requires it.
9. Determine the first player.
10. Draw the starting hands according to the active setup rule.
11. Enter Round 1, first player Draw Phase.

Setup state is validated before normal actions become available. The AI and UI cannot edit setup zones after Runtime accepts the starting state.

6. Turn and Phase Structure

Phase	Primary purpose
Draw Phase	Start-turn checkpoint, mandatory draw, Mana Regen, draw replacement, and Draw-triggered lifecycle.
Deploy Phase	Setup, Tactical, Item, Event, active abilities, active Racial Traits, and legal reposition.
Battle Phase	Attack declaration, combat abilities, response chains, Casting release checkpoints, and combat continuation.
Reform Phase	Support, recovery, Legacy Ability, legal reposition, and post-battle preparation.
End Phase	Status ticks, duration reduction, End Phase attachment expiry, defeat/lose checks, and turn pass.

After End Phase completes, priority passes to the opponent and the opponent enters Draw Phase. A global turn means one active-player turn from that Draw Phase through that End Phase.

7. Draw Phase

Draw Phase begins with the registered DRAW_PHASE_START checkpoint. The current runtime order is:

12. Reset the active player turn statistics.
13. Tick eligible defensive and start-turn Attachments. Creation never consumes a counter at the same checkpoint in which the Attachment was created.
14. Announce the phase change.
15. Attempt the mandatory draw. If the Main Deck is empty, the active player loses immediately.
16. Move the drawn card from Main Deck to Hand.
17. Gain Mana equal to the active player Mana Regen.
18. Clear normal Exhaust on active Heroes; a Hero still in casting state remains Exhausted.
19. Advance registered draw counters and progress Attachments, including Aura Infusion Bolt.
20. Offer legal draw-replacement choices such as Quick Reload or Rapid Chamber through an explicit prompt.
21. Continue to Deploy Phase when no mandatory prompt remains.

Every card actually drawn is recorded. A shuffle-redraw ability records the replacement draw and advances draw-based counters again where the runtime effect requires it.

8. Deploy Phase

Deploy Phase is the primary non-combat setup phase. Legal actions are generated from current state and structured timing.

- Play Tactical Skills whose timing includes Deploy Phase.
- Play legal Items and Events.
- Play Support Skills whose card data includes Deploy Phase.
- Use active Class Abilities that specify Deploy Phase.
- Use active Racial Traits that specify Deploy Phase, subject to Racial Token and shared spend limits.
- Use a Legacy Ability from an allied LEGACY slot.
- Perform manual Reposition when legal.
- Pass to Battle Phase.

Tactical, Item, Event, and Support actions do not automatically share one source or targeting model. The runtime card record determines whether source, target, host, class, capacity, and confirmation are needed.

9. Battle Phase

Battle Phase is the combat phase. On entry, the BATTLE_PHASE_START checkpoint ticks normal Casting Attachments and releases any whose countdown reaches zero.

- Declare a legal Attack Card from Hand.
- Use a Battle Phase active ability or Racial Trait.
- Respond only when Runtime opens a matching response window.
- Resolve Area, multi-target, Casting, and special attacks through their registered handlers.
- Complete any queued secondary reposition or choose-or-skip continuation before the Attack Card leaves Pending.
- Pass to Reform Phase.

Casting release

A released Casting Attack resolves through normal target, response, damage, and state-check flow. The source exits casting state but remains Exhausted until a later normal Draw Phase clear.

10. Reform Phase

Reform Phase is used for support, recovery, Legacy actions, and preparation after combat.

- Play Support Skills whose timing includes Reform Phase.
- Play Items or Events whose timing includes Reform Phase.
- Use Reform-legal Class Abilities.
- Use a Legacy Ability from an allied LEGACY slot.
- Perform legal manual Reposition.
- Resolve mandatory Reform prompts before passing.
- Pass to End Phase.

Attack Skills are not normally legal in Reform Phase unless card-specific structured timing explicitly overrides the normal rule.

11. End Phase

End Phase resolves current-player end-of-turn state in the following runtime order:

22. Resolve registered End Phase triggers.
23. For each active Hero, apply negative-status tick damage such as Poison, Burn, Bleed, or Decay when applicable.
24. Damage immunity and prevention are checked before status damage is applied.
25. Reduce duration of timed negative statuses and remove expired statuses.
26. Queue defeat and Legacy replacement if a Hero reaches 0 HP.
27. Tick and expire END_PHASE Attachments and charges.
28. Complete defeat and lose checks.
29. Pass the active player to the opponent and enter the opponent Draw Phase.

Exhaust does not clear at End Phase.

12. General Action, Cost, and Choice Flow

12.1 Validation before payment

30. Declare the action or card.
31. Validate timing and action category.
32. Validate source, source readiness, class, lineage, rank, and ownership where applicable.
33. Validate mandatory effect candidates and Attachment capacity before payment.
34. Validate cost availability.
35. Validate target or exact object candidates.
36. Require explicit selection and confirmation.
37. Pay cost and commit the action only after validation succeeds.

12.2 Explicit physical-TCG choice authority

A selectable object must be shown and confirmed even when there is only one legal option or when the number of legal candidates exactly equals the required count.

- Exact Hand cards paid as cost.
- Exact Discard Pile cards returned, removed, or recovered.
- Exact Main Deck search result.
- Exact EXP Card selected from a Hero stack.
- Exact negative status removed from a Hero.
- Exact target Hero or tactical slot.
- Choose-or-skip continuation after an attack.
- Cost selection and effect selection are separate confirmation stages.

Automatic movement is allowed when no object choice exists, such as an expired card moving to Discard, a pure draw, a token gain, or a rule that removes all matching objects.

13. Card Family Flow

Family / category	Default flow
Attack Skill	Hand -> Pending/Casting -> response chain -> attack resolution -> continuation -> Discard, unless it creates a registered ongoing Attachment.
Tactical Skill	Validate phase/source/cost/choice -> Pending -> response if applicable -> resolve -> Discard or Attachment.
Support Skill	Validate legal support timing and target -> resolve healing/support -> Discard or Attachment.
Defense Skill	Only during matching response window -> commit to Response Pending -> response chain -> resolve -> Discard or registered persistent Attachment.
Item	May be instant, targeted, host-based, ongoing, or consumable. Source and target are required only when structured data says so.
Event	Uses its event-specific source, target, cost, and timing contract. It does not automatically occupy an Attachment Slot.
Hero Ability	Active, passive, triggered, or draw-replacement behavior. Active use follows normal validation and commit flow.
Legacy Ability	LEGACY source, Deploy/Reform timing, exact cost selection, exact effect selection, once per Legacy instance per turn.

14. Attack Declaration and Resolution

14.1 Declaration

38. Choose an Attack Card from Hand.
39. Choose the attacking Hero source when the card requires a source.
40. Validate that the source slot is HERO, the Hero is not defeated, is not Exhausted, is not Stunned, and is not blocked by casting or another restriction.
41. Validate class, rank, lineage, Ultimate owner, action profile, timing, requirement, Mana cost, and target model.
42. Select the legal target Hero or tactical slots when target selection is required.
43. Confirm the attack.
44. Pay cost and move the Attack Card to Pending or Casting.
45. Open the first matching response window.

14.2 Resolution

46. Resolve committed response frames last-in-first-out.
47. Determine final target, redirect, dodge, block, prevent, cancel, negate, damage modification, and attack conversion.
48. Apply final damage or registered residual damage.
49. Apply on-hit, on-damage, status, mana, healing, draw, and other secondary effects according to their trigger semantics.
50. Process Hero defeat and Legacy replacement.
51. Resume queued continuation such as choose-or-skip reposition.
52. Move the Attack Card to Discard unless it remains as a registered ongoing Attachment.
53. Run trigger and lose checks.

A normal resolved Attack Skill does not remain in an Attachment Slot merely because the UI staged it near a Hero during play.

15. Response Chain and Priority

Response commitment occurs before counter-response priority.

54. Runtime opens a response window for the current affected Hero or event.
55. The priority player selects a legal response.
56. The response selection is confirmed.
57. The response cost is paid.
58. The response card moves from Hand to Response Pending.
59. Only after commitment does priority pass to the opponent for a counter-response.
60. Each new committed response creates a new stack frame and passes priority again.
61. A pass closes the current opportunity for that priority owner. When the chain closes, frames resolve last-in-first-out.
62. After the stack resolves, the original action continues or fails according to the resolved frames.

No premature resolution

Selecting a response is not resolution. Confirmation and commitment must finish before the response changes Game State or opens counter priority.

The game rules do not impose a fixed response-depth cap. Implementations may protect against technical abuse without changing legal priority behavior.

16. Multi-target Response Windows

A multi-target effect never uses one global defender response window. Runtime processes each affected Hero separately in deterministic tactical slot order.

- Area Attacks open one response chain for each affected Hero.
- Dual Arrow opens one response chain for each selected Hero; a selected Legacy receives no Hero response window.
- Venom Detonation opens one response chain for each poisoned opponent Hero.
- A Hero-specific Dodge, Block, Prevent, or damage reduction affects only that Hero unless the response text explicitly has broader scope.
- Cancel or Negate follows the legal response frame defined by its card contract; the UI must not invent a separate global window.

After one Hero chain resolves, Runtime applies that Hero result and proceeds to the next affected Hero unless the original action has been canceled or another rule ends the effect.

17. Attack Targeting and Positioning System v2.2

Normal attack coverage uses tactical slot names, not visual screen coordinates. Opponent boards may be mirrored visually, but intents and server state always use Left, Center, and Right.

Attacking source slot	Legal opponent slots under normal Area of Attack
Left	Left or Center
Center	Left, Center, or Right
Right	Center or Right

- A non-Area Attack requires explicit target selection unless a card-specific handler derives its targets.
- Area Attack uses no manual target picker and affects all legal opponent Heroes inside the source Hero Area of Attack.
- A Range Attack or another attack profile may override normal coverage only when the structured card record explicitly grants that override.
- Legacy is not a legal Hero target. It may be a legal tactical-slot selection only for an explicit slot-based effect such as Dual Arrow filler or a permitted Hero-Legacy swap.

18. Special Attack Shapes and Restrictions

18.1 Area Attack

Area Attack has no target picker. Runtime derives affected opponent Heroes from the source position and opens a separate response chain for each affected Hero.

18.2 Dual Arrow

- Select exactly two distinct opponent tactical slots.
- Each selected slot may contain HERO or LEGACY.
- At least one selected slot must contain a legal Hero.
- Only selected Heroes receive damage and response windows.
- Legacy is a legal filler so the card remains playable when only one opponent Hero survives.
- Selection is individual; Runtime must not auto-select a lane pair or treat the two slots as one target package.

18.3 Venom Detonation

- Playable only when at least one non-defeated opponent Hero has Poison.
- Targetless: Runtime derives all poisoned opponent Heroes.
- For each affected Hero, remove the exact Poison instance first, then calculate Magical damage from the stored Poison duration.

- It cannot be Dodged.
- A legal Magical-damage Block or Prevent may protect the current affected Hero.
- Poison remains removed even if final damage becomes 0.

18.4 Taunt restriction

While Taunt restricts a player, that player cannot declare any Attack that affects more than one target. This includes Area Attack, Dual Arrow, All Target, and another multi-target attack shape.

19. Damage, Hit, and Connected Resolution

Runtime must not treat hit, connected resolution, and actual HP damage as interchangeable terms.

Trigger concept	Meaning
Actual HP damage	Final HP decreases by more than 0 after responses and modifiers.
Connected resolution	The attack was not canceled, negated, or dodged; Block to 0 may still count when the registered effect uses connected semantics.
Dodged	The current target avoids the attack damage; normal on-hit and HP-damage effects do not trigger unless a card explicitly defines residual behavior.
Canceled / Negated	The original action does not resolve for the affected frame.
Prevented	Use the card-specific trigger contract. Some effects require HP damage; Spell Blade mana-drain connected-hit locks explicitly exclude Prevent.

19.1 General damage pipeline

63. Identify source, target, attack/damage type, and base value.
64. Apply legal source and target modifiers.
65. Resolve Dodge, Block, Prevent, redirect, immunity, and damage conversion.
66. Apply final damage to HP.
67. Trigger HP-damage effects only when final HP decreased.
68. Trigger connected effects only when their registered connected definition is satisfied.
69. Queue defeat if HP reaches 0.
70. Run continuation and lose checks.

19.2 Spell Blade mana-drain family

Mana Absorption, Aether Slash, and Aether Infusion converted attacks use their specific connected-hit mana rule: Dodge, cancel, negate, or prevent excludes the target; Block to 0 still counts as connected and may remove or transfer Mana.

20. Healing Flow

Final heal is calculated as: printed/base heal + source Healing Done modifier + target Healing Received modifier, capped at target Max HP.

20.1 Single-target heal

- Target must be an allied HERO, not defeated, below Max HP, and not affected by Bleed.
- Validate target before paying cost.
- If no legal target exists, the action cannot be committed.

20.2 Multi-target heal

Skip full-HP, defeated, and Bleed Heroes. Resolve healing for every remaining legal target. The presence of an illegal target does not cancel healing for legal targets.

20.3 Specific heal locks

- Holy Blast healing resolves independently even when its damage is prevented or becomes 0.
- Holy Slash self-heal requires actual HP damage and a damaged, non-Bleed source Hero.
- Greater Potion Exhausts its target only when HP actually increases.
- Legacy-source healing and other special sources use their registered modifier policy; do not apply class or Item modifiers unless the effect explicitly allows them.

21. Status Flow

Status is attached to a valid Hero identity. Legacy cannot receive Hero status.

71. Validate the target Hero and status source.
72. Check immunity, prevention, replacement, and current status restrictions.
73. Apply the status instance and duration.

- 74. Resolve immediate status effects when applicable.
- 75. At End Phase, apply registered negative-status tick damage.
- 76. Reduce timed negative-status duration and remove expired instances.
- 77. Queue defeat and lose checks after status damage.
- Shield, Buff, and Debuff are broad labels; structured effect data defines the actual behavior.
- Unbroken Stand prevents negative status application while its Attachment remains active.
- Ice Block damage immunity also applies to valid status tick damage while active.
- When an effect removes one negative status, the exact status instance must be selected and confirmed, even when only one is legal.

22. Exhaust and Casting

22.1 Exhaust

An Exhausted Hero cannot perform normal active Hero actions unless an explicit rule allows the action while Exhausted.

Normally blocked while Exhausted	Still possible when legal
Declare an Attack; act as normal Skill source; manual Reposition as active Hero; use an activated Class Ability.	Receive damage or healing; receive or lose status; passive and triggered effects; Racial Trait when its timing allows; legal response whose card or trait permits an Exhausted Hero.

22.2 Casting

- When a Hero commits a Casting card or Casting Attack, set casting = true and exhausted = true.
- A Hero still casting is not readied by normal Draw Phase Exhaust clear.
- Normal Casting countdown ticks at the next eligible Battle Phase start.
- When the Casting resolves or is canceled, clear casting state.
- Clearing casting does not immediately ready the Hero; Exhaust remains until a later normal Draw Phase clear.
- Aura Infusion Bolt uses draw progress rather than normal Casting countdown.

23. Attachment and Ongoing Effect Lifecycle

A card uses a persistent Attachment Slot only when its effect survives beyond the phase or response window in which it resolves. Each Hero identity has two persistent slots.

23.1 Capacity and host rules

- Validate Attachment capacity before paying cost.
- Every persistent Attachment has a host Hero identity, remaining_count or progress, tick_phase, and visible counter.
- Hosted Attachments move with the Hero during Reposition.
- A normal defeated host sends its hosted Attachments to Discard.
- Stoneblood prevention keeps Attachments because defeat did not occur.
- Release, expiry, consumption, cancellation, or host defeat moves the card to the correct zone exactly once.

23.2 Lifecycle checkpoints

Category	Checkpoint	Counter / result
Defensive and start-turn restrictions	DRAW_PHASE_START	Decrement at the next eligible owner checkpoint; expire/clear at zero.
Normal Casting	BATTLE_PHASE_START	Decrement at the next eligible owner checkpoint; release and resolve at zero.
Bufs, modifiers, next-turn effects, and unused charges	END_PHASE	Decrement at the eligible End Phase; expire or consume at zero.
Aura Infusion Bolt	Owner draw event	Progress (0/5) to (5/5); resolve at five.

Creation never decrements an Attachment at the same checkpoint. Visible labels include (1), (2), and progress forms such as (3/5).

23.3 Persistent and non-persistent examples

Persistent examples	Immediate / non-persistent examples
Taunt, Invisibility Cloak, Holy Ring protection, Camouflage, Triple Shot, Aether Infusion, Poison Vial, Ice Block, Unbroken Stand.	Charged Shot, Sacred Bulwark, Colossal Dreadbolt, normal instant attacks, and transient response cards unless a card-specific lock says they remain.

Ice Block and Unbroken Stand remain attached after their immediate defense resolves and expire through their End Phase lifecycle. They must not exist in Attachment and Discard simultaneously.

24. Reposition and Secondary Continuation

24.1 Manual Reposition

Selected pair	Result
HERO <-> HERO	Swap the two Hero identities; both become Exhausted.
HERO <-> LEGACY	Swap slot modes; only the Hero becomes Exhausted.
LEGACY <-> LEGACY	Illegal.

24.2 Card-effect reposition

- Card-effect swap updates Runtime board state, not only UI position.
- HP, EXP, status, attachments, ongoing effects, casting, Exhaust, and identity move with the Hero.
- Card-effect swap does not Exhaust unless the card text or structured effect says it does.
- If an effect says adjacent, Left <-> Center and Center <-> Right are adjacent; Left <-> Right is not.
- Card-specific Hero-only effects cannot select Legacy unless the current runtime lock explicitly allows Hero-Legacy.

24.3 Secondary attack continuation

78. Evaluate the registered trigger: actual HP damage or connected resolution.
79. Resolve damage, on-hit effects, defeat, and Legacy replacement first.
80. Keep the Attack Card Pending while continuation is queued.
81. Re-check legal swap pairs in the updated board state.
82. If at least one legal swap exists, show an explicit choose-or-skip prompt.
83. Allow HERO-HERO and HERO-LEGACY when the current lock permits them; reject LEGACY-LEGACY.
84. After selection or skip, finish the action and move the Attack Card to its final zone.

25. Defeat, Legacy Mode, and Revive

25.1 Hero defeat

85. When HP reaches 0, first check a legal defeat-prevention replacement such as Stoneblood.
86. If defeat is not prevented, mark the Hero defeated and resolve defeat cleanup.
87. Move hosted Attachments to Discard unless an explicit prevention or replacement keeps the Hero on the field.
88. Open the required Legacy replacement choice from the owner Legacy Deck.
89. Set the tactical slot mode to LEGACY and preserve the defeated Hero snapshot needed for revive and display.
90. Resume any queued continuation after the Legacy choice completes.
91. Check whether all three Heroes are defeated.

25.2 Legacy mode

- Legacy has no HP, Max HP, EXP, status, Exhaust, Hero Attachment Slots, class action, or Racial Trait.
- Legacy cannot be attacked or targeted as a Hero.
- Legacy may be a manual Reposition partner with a Hero.
- Legacy may activate its own Legacy Ability in Deploy or Reform when legal.
- Legacy may be selected as a tactical-slot filler only by an explicit slot-based rule.

25.3 Revive

- A revive targets a defeated allied Hero represented by Legacy mode or the registered defeated snapshot.
- Return the active Legacy overlay to the owner Legacy Deck and clear overlay state.
- Restore HERO slot mode and the base Hero identity.
- Use the HP, EXP, status, and Exhaust result defined by the revive card.
- Resurrection specifically returns the Hero with 20 HP, empty EXP, and Exhausted state.

26. Legacy Ability and Hidden-information Flow

26.1 Timing and use

- All current Legacy Abilities are legal during the controller Deploy Phase and Reform Phase.
- Each Legacy instance may use its ability once per turn.
- A Legacy source never Exhausts.

26.2 Two-stage choice flow

92. Declare the Legacy Ability.
93. Validate timing, once-per-turn use, exact cost-card availability, and mandatory effect candidates.
94. Select exact cost-card instances from Hand.
95. Confirm cost selection.

96. Move cost cards to Discard.
97. When the effect selects cards, select exact effect-card instances from the pre-cost candidate snapshot where applicable.
98. Confirm effect selection.
99. Resolve movement, reveal, draw, token gain, and required shuffle/randomization.
100. Mark that Legacy instance used for the turn.

Cards paid as the cost cannot become candidates for a same-effect Discard-return selection because the effect uses the pre-cost Discard snapshot.

26.3 Reveal and privacy

- A specifically chosen card moved from Main Deck or Discard Pile to Hand is revealed transiently through Opponent Played when its Legacy contract requires reveal.
- After reveal, the card enters the owner private Hand and is no longer face-up.
- Pure draws are private and are not revealed.
- After a deck search or inspection, shuffle the affected deck unless the card explicitly overrides.
- After an opponent Hand view, randomize the affected Hand order or slot mapping unless the card explicitly overrides.

Card-specific Legacy effects

The exact 10 Legacy effects and filters remain defined by LEGACY_FULL_RUNTIME_LOCK v0.11.1 and Season 1 Runtime Data v0.11.4. This flow rulebook does not replace those executable definitions.

27. Racial Trait Flow

Racial Traits are active, response, or triggered effects. They use the Hero identity as source display, but they do not Exhaust the Hero unless an explicit future rule says otherwise.

- Racial Token Pool default maximum is 2.
- A player may spend at most 1 Racial Token total per global turn across all Heroes and Racial Traits.
- Gaining a Racial Token does not consume the spend limit.
- Racial Trait use is not blocked by Exhaust.
- Active traits appear only in their legal phase.
- Response traits appear only in a matching response window.
- Triggered traits appear only when their trigger occurs and must not be shown as free action buttons.

Trait example	Current flow lock
Human Ambition	Deploy active; spend 1 Racial Token; draw 2.
Ancestral Focus	Deploy active; spend 1 Racial Token; gain 2 Mana.
Primal Strike	Battle active; spend 1 Racial Token; deal 20 direct damage to an injured opponent Hero through the response/damage pipeline. It is not Attack Card damage.
Dragon Scale	Response for incoming Physical or Magical damage to that Dragonborn; spend 1 token; Block 40.
Stoneblood	Optional would-be-defeated trigger; spend 1 token; remain at 10 HP and preserve EXP, statuses, attachments, buffs/debuffs, and current Exhaust because defeat did not occur.
Second Chance	Optional after this Halfling Skill is Dodged; spend 1 token; replay the same Skill immediately for 0 Mana.

Card text may also define a per-Hero limit such as same Hero once per turn. That limit applies in addition to the shared player-wide token-spend limit.

28. Deck-out and Effect Draw

Draw context	Deck empty result
Mandatory Draw Phase draw	The active player loses immediately.
Card or ability effect draw	Draw as many cards as available, including zero; no deck-out loss.
Legacy pure draw	Draw as many as available; private; no deck-out loss.
Draw replacement	Resolve according to the replacement contract. Each card actually drawn is recorded and may advance draw counters.

Runtime must not declare a loss merely because the Main Deck becomes empty after a legal effect draw. Loss is checked when the next mandatory Draw Phase draw cannot draw.

29. Ultimate, EXP, and Lineage Validation

- Ultimate use and Ultimate Tribute are bound to the printed owner lineage and the structured owner requirement.
- A class match alone does not override an owner-bound Ultimate requirement.
- Ultimate cards cannot be selected by a non-Ultimate search, return, discard, or EXP-removal filter.
- EXP Card selection is exact and confirmed when a card effect chooses an EXP instance.
- Removing EXP does not rank a Hero down unless a future rule explicitly creates rank-down behavior.
- Rank Up and Tribute effects use the current RankUp runtime package and card-specific requirement data.

Example: Blessing of Divinity remains owner-bound to the Aurex Sunsworn lineage for use and Tribute legality.

30. Zone Movement and Runtime Logging

30.1 Common zone movement

Action type	Expected movement
Normal draw	Main Deck -> Hand
Normal Attack Skill	Hand -> Pending/Casting -> Discard
Response card	Hand -> Response Pending -> Discard or registered Attachment
Instant Tactical / Item / Event	Hand -> Pending -> Discard
Ongoing effect	Hand -> Pending -> Hero Attachment Slot -> Discard on expiry/consumption
Legacy search to Hand	Main Deck / Discard -> Opponent Played transient reveal -> private Hand
Defeat replacement	Legacy Deck -> Legacy overlay / LEGACY slot
Revive	Legacy overlay -> Legacy Deck; defeated Hero snapshot -> HERO slot

Every movement is recorded exactly once. A card must never exist simultaneously in two authoritative zones.

30.2 Recommended runtime events

- ACTION_DECLARED, TIMING_CHECKED, SOURCE_SELECTED, CLASS_COMPATIBILITY_CHECKED
- COST_SELECTED, COST_CONFIRMED, COST_PAID, TARGET_SELECTED

Event logs support AI decision review, PvP synchronization, replay, debugging, animation, and rule validation. Logs describe results; they do not authorize the UI to mutate state.

31. AI Decision Flow and Runtime Safety

31.1 AI flow

101. Read the current public and AI-owned private Game State.
102. Ask Runtime for legal actions and current mandatory prompts.
103. Score only the returned legal options.
104. Choose one intent and provide the exact source, target, cost instances, and choices required.
105. Submit intent to Runtime.
106. Allow Runtime to validate again, commit, resolve, and return the updated state and events.
107. Repeat from the updated state.

31.2 Runtime-owned state

Runtime is the sole authority for phase, turn, active player, priority, Mana, Mana Regen, HP, Max HP, damage, healing, draw, deck count, Hand movement, Discard, Exhaust, casting, status, Attachment lifecycle, class and lineage legality, target legality, response legality, defeat, Legacy replacement, revive, and win/loss.

31.3 Intent examples

START_GAME, PLAY_CARD, SELECT_SOURCE, SELECT_TARGET, SELECT_COST_CARD, CONFIRM_COST, CONFIRM_ACTION, DECLARE_RESPONSE, CONFIRM_RESPONSE, PASS_PRIORITY, RESOLVE_PENDING, USE_ABILITY, USE_RACIAL_TRAIT, USE_LEGACY_ABILITY, REPOSITION, CHOOSE_CONTINUATION, PASS_PHASE, SURRENDER.

32. UI Presentation and Animation Boundary

Animation is presentation only. It consumes Runtime events and must never decide or delay authoritative legality or state outcome.

Runtime event / state change	Permitted visual presentation
CARD_MOVED Main Deck -> Hand	Animate a card back from Main Deck to Hand.
Targeted card committed	Animate a temporary card image from Hand toward the selected Hero.
Resolved instant card	Continue the temporary image to Discard after resolution.
Persistent effect created	Continue the temporary image to the host Hero Attachment Slot.
Attachment expired / consumed	Animate Attachment to Discard.
Hero exhausted = true	Rotate the Hero card 90 degrees while preserving slot identity and click mapping.
Hero exhausted = false	Rotate the Hero card back to 0 degrees.
Reposition resolved	Animate the two displayed card positions while using the already-updated Runtime state.

- Use event IDs or sequence numbers so the same event is not animated twice.
- Maintain an animation queue for simultaneous or chained events.
- A skipped or disabled animation must still display the correct final state.
- Hidden cards must use card backs until Runtime authorizes reveal.
- Animation assets must use the current FINAL WebP set and one shared card-ID-to-asset mapping.

33. FINAL Card Source Behavior Locks

The following five behavior locks were added with the FINAL 198-card source synchronization and are explicitly included in the current runtime stack.

Card	Locked runtime behavior
Scouting (S1-EVT-003)	Costs 3 Mana. Choose a valid allied active source Hero, an opponent Hero with eligible EXP, and one exact non-Ultimate EXP Card. After successful resolution, Exhaust the source Hero. Move that EXP to its owner Discard, then move Scouting to its owner Discard. No Attachment Slot and no rank-down.
Triple Shot (S1-ARC-013)	Choose Poison Arrow or Burning Arrow; the chosen card becomes Area Attack for this turn. Triple Shot does not Exhaust its Hero and remains as a modifier until its End Phase lifecycle completes.
Holy Ring (S1-CLE-009)	Cleric resolves only 60 Magical damage. Priest and Saint also receive the printed untaractable protection until the next owner Draw Phase start.
Resurrection (S1-CLE-015)	Revive one defeated allied Hero with 20 HP and empty EXP; return the active Legacy overlay to Legacy Deck, clear overlay state, restore HERO mode, and Exhaust the revived Hero.
Smoke Screen (S1-THF-004)	May negate a legal targeted non-Casting Attack and return that Attack Card to its owner Hand. It cannot negate a Casting Attack.

34. Duration Wording Lock

Printed duration wording maps to registered runtime lifecycle. The card does not become persistent only because it contains a duration phrase; the structured Attachment policy must also define the host, count, and checkpoint.

Effect length / condition	Preferred wording	Runtime meaning
Attack/offensive effect for current turn	This turn.	Expires at the current owner End Phase.
Two-turn offensive case where the current usable turn is skipped because the source is Exhausted	Next turn.	Held for the source Hero next usable turn through its registered End Phase lifecycle.
Offensive effect through owner next turn without skipping current availability	Until the end of your next turn.	Remains active through the owner next End Phase.
Defensive effect for one opposing action cycle	Until the start of your next turn.	Expires at the next owner DRAW_PHASE_START.
Defensive effect for two opposing action cycles	Until the start of your second turn.	Uses two owner DRAW_PHASE_START countdowns.

- Use turn for 1 turn and turns for 2 or more turns in rules notes.
- Use second turn instead of 2nd turn when space allows.
- Any text containing until, this turn, next turn, start of, or end of must map to a registered lifecycle or an explicit immediate-resolution exception.

35. Document Authority and Version Lock

- This v0.3 PDF is the active readable AI/game-flow rulebook lock until superseded.
- It replaces v0.2 as the current readable Game Flow reference.
- Runtime Foundation v1.50, Runtime Core v0.21, Runtime Data v0.11.4, Effect Checkpoint v0.10.2, and Shared Runtime Manual v1.9 remain executable implementation authority.
- Grandis Legacy Cards Season 1_FINAL remains the locked 198-card visual and printed source.
- Application packages may include this PDF as a reference but must not silently modify it.
- A future update must identify whether each change is wording-only, runtime-affecting, data-affecting, UI-only, or package-only.

PDF lock status

Distribute the current rulebook as PDF. An internal DOCX may be used as an editing source but is not the active published lock.

Appendix A. Summary Flows

A.1 Targeted Attack

Choose Attack Card -> choose source Hero -> validate class/rank/owner/timing/cost -> choose target -> confirm -> pay cost -> Hand to Pending/Casting -> per-Hero response chain -> LIFO response resolution -> attack resolution -> damage/effects -> defeat/Legacy -> continuation -> Discard or Attachment -> state checks.

A.2 Area Attack

Choose Area Attack -> choose source -> validate -> confirm -> pay cost -> derive affected Heroes from Positioning System -> process one Hero response chain at a time -> apply each Hero result -> finish secondary effects -> Discard or Attachment -> state checks.

A.3 Response

Window opens -> select response -> confirm -> pay cost -> Hand to Response Pending -> opponent counter priority -> repeat until chain closes -> resolve stack last-in-first-out -> continue original frame.

A.4 Persistent Attachment

Validate host and one of two slots -> validate cost -> confirm -> commit -> resolve initial effect -> place in host Attachment Slot -> show counter -> ignore same creation checkpoint -> tick at registered future checkpoint -> release/expire/consume -> move to Discard exactly once.

A.5 Legacy Ability

Choose LEGACY source -> validate Deploy/Reform and once-per-turn -> select exact cost cards -> confirm cost -> pay cost -> select exact effect cards -> confirm effect -> resolve reveal/draw/movement -> shuffle/randomize hidden zone when required -> mark Legacy used.

A.6 Secondary Reposition

Attack connects or deals HP damage according to registered trigger -> resolve defeat and Legacy replacement -> recompute legal swaps -> choose one or skip -> apply swap -> finish pending action -> move card to final zone.

Appendix B. v0.2 to v0.3 Change Summary

Area	v0.3 update
Response	Added commit-before-counter priority, alternating response frames, LIFO resolution, and per-Hero multi-target windows.
Attachment	Added two slots per Hero, explicit counters, three lifecycle checkpoints, same-checkpoint protection, host-follow behavior, and Aura progress.
Casting	Added casting = Exhausted, Draw Phase ready exception, release behavior, and Aura Infusion Bolt distinction.
Targeting	Added Positioning System v2.2, Area no-picker flow, Dual Arrow slot selection, Venom Detonation, and Taunt multi-target restriction.
Damage	Separated HP damage, connected resolution, Dodge, Block-to-zero, Prevent, and card-specific trigger semantics.
Healing	Added modifier calculation, Bleed/full-HP legality, multi-heal skipping, and specific heal locks.
Legacy	Added exact two-stage choice, pre-cost snapshot, transient reveal, hidden-zone randomization, and private pure draw.
Racial	Added max 2 tokens, one token spend per player per global turn, active/response/trigger separation, and current trait locks.
Deck-out	Locked loss to failed mandatory Draw Phase draw only.

Area	v0.3 update
Reposition	Added card-effect state movement and secondary continuation through defeat/Legacy replacement.
FINAL cards	Added Scouting, Triple Shot, Holy Ring, Resurrection, and Smoke Screen runtime locks.
UI boundary	Added event-driven animation guidance and 90-degree Exhaust presentation as non-authoritative UI behavior.

End of document.
